

# Questions

## Enterprise SSO over mobile devices

1. What approaches to extending enterprise single sign-on technologies to mobile devices are available today?
2. If mobile devices could fully participate in enterprise SSO beyond mobile web applications, what benefits to enterprises (and telecom carriers) result?
3. Why do enterprise telecommunications customers want support for identity federation with carrier services? What enterprise benefits result?
4. If SIP is the future of VoIP, why won't it work with any enterprise SSO systems today? Are any standards in the works to address this?
5. How does Card Space fit into an enterprise SSO story in general? What additional capabilities does Mobile Card Space add?
6. Do any carriers have plans to support identity federation with enterprises through SAML assertions or WS-Federation in the future? If not, why?
